

# Flood Risk

- For years we have asked Thames Water to explain how building the reservoir over the local flood plain will affect local flooding.
- Thames Water said comprehensive studies will be done later in the planning process.
- This week Thames Water told a local developer: *“Thames Water has undertaken extensive and rigorous flood risk modelling work in relation to the proposed reservoir and it will not increase the risk of flood elsewhere”*
- Why did they tell us they would be done later? Why won't they give us these studies?
- In 2016, a Thames Water study stated that there was not enough room on the site to build flood the compensation areas needed.
