

# Other Schemes

- Given that WRSE massively overstate the future need, there are lots of other cheaper, quicker, less intrusive, more environmentally friendly schemes that could be built instead.
- River Severn to Thames Transfer. Built quickly with minimal impact.
- London recycling. Lots of opportunities to make more use of water recycling - like they do in other countries that are short of water.
- Desalination. Most coastal countries that are short of water make much more use of desalination. Thames Water say it is expensive, ignoring the large technological improvements that are here already or in development. Can be powered by carbon free renewables.
- Grand Union Canal. The Grand Union Canal is an easy and cheap way of transferring water into the region.
- Stop transferring water out of the Thames Valley
